#### DETAILED ACTION

1. Applicant's election with traverse of Group I, claims 1-15, and 20-30 in the reply filed on 4/23/04 are acknowledged. The traversal is on the ground(s) that the examination of the three groups of claims would not constitute a significant additional burden on the examiner. This is not found persuasive because the inventions of group II and III contains features which distinguishable from the intermediate polymer product in Group I. The additional features clearly requires search in technological areas outside of polymer chemistry, hence, would place a significant burden on the office.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 16-19, and 31-33 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 4/23/04.

Claims 1-15, 20-30 are currently under consideration in this application

### Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

Application/Control Number: 10/081,628

Art Unit: 1713

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 2-5, 11, 13, 20-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

On what basis is the recited ranges of mEq based on or in reference to?

The recited "average molar mess" defining a polymer is indefinite, and should be defined by one of the standard types (Mw, Mn, etc).

In claim 13, which monomer contains the polymeric component P which is an essential component defined in claim 1?

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

<sup>(</sup>b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/081,628

Art Unit: 1713

6. Claims 1, 7-10, 12, 14, and 30 rejected under 35 U.S.C. 102(b) as being anticipated by Letourneur et al. (US-712).

US 4,950,712 to Letourneur et al. discloses a process in the modification of polymers derived from crosslinked polystyrene (substituted and unsubstituted) and dextrans with utility in molecular recognition and purification. Specifically prior art teaches substitution of one or more functional linkages into the base polymer (col. 1, line 30 to col. 6, line 44). Among the substituted linkages taught are those comprising phosphate residues (A1) and phospholipids (A4), separated by spacer defined in prior art disclosure, thus, meeting the requirement set forth in claim 1. Prior art further disclose up to 50 parts by weight of copolymer units in the crosslinked base polymer, including those of hydrophilic origin (col. 3, lines 40-58). The reference discloses and exemplifies sequential reactions in producing the various modified product, which embraces the process steps expressed in claims 14-15, and 30, thus, anticipating the instant claims.

7. Claims 1-8, 11-12, 14-15, 20-30 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 0 238 853.

Art Unit: 1713

EP-853 discloses a process for producing phosphonated polymer via a transamidation between acrylamide (co)polymers and a chemical reactant defined in formula I. In addition to the amine and phosphonated functional groups, the chemical reactant may also contain other functional groups which embraces the instant F and U groups as claimed. Prior art further discloses modified polymer products having the instant molecular weight. The recited amounts of F, A, U, and the sequential process steps expressed in claims 14 and 30 are expressively disclosed and exemplified in the reference, thus, anticipating the instant claims.

### Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 2-5, 11, 20-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Letourneur et al. (US-712) as discussed above and further in view of the following.

Application/Control Number: 10/081,628

Art Unit: 1713

Prior art may be silent regarding some embodiments of the recited proportions and the resulting molecular weight of the modified polymers. The examiner is of the position that since the general conditions of forming the modified polymers are disclosed in the prior art, discovering the optimum or workable ranges would involve only routine skill in the art because the selection of suitable amount of the respective modifying functional groups and the resulting molecular weight would be readily envisaged by one skilled in the art in light of the common endeavor (i.e. molecular recognition) between prior art and the instant invention.

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Helen L. Pezzuto whose telephone number is (571) 272-1108. The examiner can normally be reached on 8 AM to 4 PM, Monday thru Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached on (571) 272-1114. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 1713

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll free).
